

METROBRICK TEXTURES

1. WIRE CUT

The wire cut texture has vertical pulls and tears in the face of the brick. The ridges and crevices create the appearance of traditional wire cut facing brick

2. SMOOTH

The smooth texture has a consistent and uniform face with a slightly rough finish from the extrusion die. Use smooth texture for a standard or modern brick appearance.

3. SCALLOP

Scalloped texture features a random curved and layered pattern that adds a unique touch to each project.

4. VERTICAL SCORE

The Vertical Score texture features striking vertical channels from edge to edge.

5. VINTAGE

The vintage texture features distressed edges and a heavily distressed surface for a worn, weathered appearance.

6. IRONSPOT

Ironspot can be added to our thin brick for additional surface activity. A metallic additive is mixed into the raw materials and blooms to the surface during firing.

ELEVATE through **TEXTURE**

Texture plays an essential role in the appearance of a wall by affecting the way the light reflects off its surface and how shadows are created. Each texture shows the colors differently. Choosing the right texture will add character and make even the most straightforward installation look compelling.

METROBRICK® offers a variety of colors, textures and sizes to enhance any building and create a unique style. All textures are available in full brick and thin brick options. Also, all of our textures in thin brick meet PCI standard making it available for Pre-cast construction projects.
